Reasons for Revision

Economic recovery in Japan and overseas, increase in new vehicle sales in Japan ahead of the consumption tax hike and other factors led to robust performance in GIS-related sales and sales of data for Japanese in-car navigation systems on a non-consolidated basis. As a result, consolidated and non-consolidated net sales and income are each expected to exceed the previous forecast figures.

Furthermore, concerning non-consolidated results of operations, the impact associated with restructuring of consolidated subsidiaries, which was included in extraordinary income at the time of the previous forecast, is expected to be recorded in non-operating income as gain on reversal of allowance for doubtful accounts. As announced at the time of the previous forecast, the concerned income will be eliminated in consolidation and therefore will not impact the consolidated results of operations.

Disclaimer: The above forecast for results of operations is prepared based on information currently available to ZENRIN Co., Ltd. as of the date of announcement of this document. Actual figures for results of operations may differ from the forecast figures due to various factors in the future.
